Period fo	 The MAILING DATE of this communication app or Reply 	ears on the cover sheet with the c	orrespondence a	ddress			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status	•

DETAILED ACTION

Priority

PLEASE NOTE: The continuing data for this application as provided by applicant is inconsistent with PTO records. Please amend the filing date of the parent case 09/777,698 to be consistent with PTO records.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The title should be limited to the currently claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Application/Control Number: 10/669,679

Art Unit: 1732

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1- 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al., USP 4,767,486 (of record) in view of Yamada et al., USP 4,917,851.

The cited primary reference substantially teaches the basic claimed process of molding a multilayer article comprising extruding a plurality of monolayers from a T-die type extruder, wherein the monolayers are superposed and laminated to form a single article of multiple layers. The use of pressing mean is included, and may comprise nip rollers. The continuous extrusion is cut and compression molded by a stamper to shape the laminate as desired. See col. 3, line 55 to col. 4, line 45; col. 5, lines 1-30.

The cited primary reference does not teach the claimed feature of a multiple T-die formed by an assembly of T-dies.

The added secondary reference teaches as conventional the feature of the use of a feed block type T-die co extrusion apparatus, readable on the claimed multiple T-die assembly, wherein multiple resin layers are laid upon one another and are then sent to the T-die to extrude a multiple layer sheet. The T-die feed block allows arranging of the layers in the formed article. The individual resin layers converge into a T-die feed block and out of a slot wherein a multi-layered sheet is produced. See col. 3, lines 1-10; col. 4, lines 30-40.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to include a feed block T-die in view of the added reference, when

Application/Control Number: 10/669,679

Art Unit: 1732

performing the process et forth in the primary reference, for manipulating the arrangement of layers in the formed article.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain <u>a</u> patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1, 2, 13, 17-20, 23 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 17-20, 23 of copending Application No. 10/747,056. This is a <u>provisional</u> double patenting rejection since the conflicting claims have not in fact been patented.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USP's 3802985; 3884606; 5688456; 5211898; 6551434; 6676793.
